**Recommendations**

Accept with minor revisions

**Recommendations to the Authors**

- Topic was relevant and drew on many different aspects of the bushfires, thus presented a comprehensive review.
- However a clearer structure with a stronger conclusion which brings together the substance of the article would be helpful. Perhaps this could be done via subheadings to guide the reader through.
- Possibly the inclusion of visual graphics could have also been helpful.
- More explanation and in general deeper analysis of the discussion and figures would have also improved the impact factor of the article.
